

Stone Artifacts of Texas Indians

REFUGIO

This unstemmed, elongate-triangular point sometimes has a needle-like distal tip. The base is convex and often thinned. Like *Kinney* and *Pandora*, it is possible that some, or most, are actually preforms or knives.

Distribution: Reported in south Texas, the central coast and the lower Pecos./**Period:** Archaic./**Sites:** Choke Canyon; La Perdida; San Miguel Creek (41AT7); McMullen County
